Credit Name:
Assignment Name:

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem

How did you approach understanding the challenge?
I approached the challenge through understanding what I did in the skillbuilders of the previous chapter.
Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?
I had difficulty creating a while loop as the console kept crashing because I had not structured the loop correctly

Planning the Solution

Did you create a plan or break the problem into smaller steps before coding?
I had broken it down to create a random umber, and the while loop for when the user enters their number.
How did you decide on the tools, data structures, or algorithms to use?
I knew I had to use a while loop because the user neeeded multiple attempts until the could guess the actual number.

Implementation

Did you write the code in small pieces or attempt the entire solution at once?
I had attmeptped the entire solution at once as i only had to generate a random number and devolop he while loop
How did you test your solution along the way to make sure it was working?
I would test, by just playing the game to make sure it was working.

Overcoming Challenges

What part of the problem was the most difficult for you?
Devloping the while loop, as noted in the error logs , I kept on running into issues
How did you handle moments when you felt stuck or unsure of what to do next?
I refered back to the textbook, and researched any parts which were not elaborated on.

Learning

Was there anything you learned that you think will help you with future challenges?
Taught me how to structure loops better, how to formulate options and how to end the loop once the goal is achieved
