Error Log Entry

What error message did you encounter (if any)?
I did not encounter any syntax issues in the Guessing game, but I ran into a incorrect function uage error, as my eclipse kept on crasing as I didn't end my while loop
What unexpected behavior did your program exhibit?
For the GuessingGame application, my program kept on crashing when a user entered a value that did not equal the actaul number.
What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)
I put an if statement (if the number does not equal the actual number, print "Wrong try Again") in the while block, this led to a logic error as if the user entered a value it would print "Wrong, try Again" forever.
Include a screenshot of specific lines of code.

```
while ((userGuess>=1) && (userGuess<=20))
{
    if (userGuess != actualNumber) {
    System.out.print("WRONG, Try again:  "  );}

    if (userGuess == actualNumber) {
        System.out.print("You WON!"  );
        break;
```

How did you fix the issue?
I removed put the outcome of the user's number being wrong outside a if statement, which prevented it from keeping on repeating the message for infinity.
Provide the corrected code or solution using a screenshot.

```
while ((userGuess>=1) && (userGuess<=20)) {
    if (userGuess == actualNumber) {
        System.out.print("You WON!"  );
        break;

    }

    System.out.print("WRONG, Try again:  "  );
    userGuess = input.nextInt();
}
```

I did not face many issues expect the initail hurdle of developing the application for digitsSUm
