Assignment Name: Chapter 3 Mastery

Error Log Entry

What error message did you encounter (if any)?

	Exception in thread "main" java.util.InputMismatchException
	at java.base/java.util.Scanner.throwFor(Scanner.java:947)
Excercise 4 - I er	at java.base/java.util.Scanner.next(Scanner.java:1602)
Type misma	at java.base/java.util.Scanner.nextDouble(Scanner.java:2573)
Type misma	at mastery.einsteinFormula.main(ErrorLogeinstein.java:28)

Excercise 9 - Exception in thread "main" java.lang.Error: Unresolved compilation problems:
The operator + is undefined for the argument type(s) int, currentDay
currentDay cannot be resolved to a type
Syntax error on token ")", invalid (

at mastery.sleepApplication2.main(sleepApplication2.java:43)

What unexpected behavior did your program exhibit?

If the user entered any letter or special characters, the program would crash.

The program would crash before even entering in a value

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

The first error message was caused by the use of int instead of double for energy, light bulbs and mass. The second error was present because
It was caused by inccorrect placement of brackets for the function I created to transform the numerals the user inputted (years,months) into days.

Include a screenshot of specific lines of code.

```
public static void main(String[] args) {  
    // TODO Auto-generated method stub  
  
    int mass;  
    int energy;  
    int lightBulb;
```

```
    daysAlive = (((currentYear)*365)+((currentMonth)*30)+(currentDay)) - (((birthYear)*365)+((birthMonth)*30)+(birthDay));  
    System.out.println("You have been alive for "+daysAlive+" days");
```

How did you fix the issue?

I changed the values from int to double, the program was able to output and handle decimal values.

I redid the equation to make sure the format of the paranthesis were perfect.

Provide the corrected code or solution using a screenshot.

```
public static void main(String[] args) {  
    // TODO Auto-generated method stub  
  
    double mass;  
    double energy;  
    double lightBulb;
```

```
    daysAlive = (((currentYear)*365)+((currentMonth)*30)+(currentDay)) - (((birthYear)*365)+((birthMonth)*30)+(birthDay));  
    System.out.println("You have been alive for "+daysAlive+" days");
```
