Include your IPO Chart with your code in Eclipse IDE: We will discuss and demonstrate this in the computer lab.

IPO CHART

Program name:	Energy application with $e=mc^2$	
INPUT	PROCESS	OUTPUT
Hint: What will the user input?	Hint: What is the program going to do with the input information?	Hint: What will the screen display after user input?
The program prompts the user for their date of birth through prompting them what year, what month and what day they were born on. The user will input the information prompted The program prompts the user for the current date through prompting them what year, what month and what day it is currently. The user will input the information prompted	The program will convert the current year and month into days and add the sum to the current day of the month. The program will convert the birth year and month into days and add the sum to the day of the month the user was born on. It will find the difference between both sums in days. <pre>daysAlive = (((currentYear)*365)+((currentMonth)*30)+(currentDay)) - (((birthYear)*365)+((birthMonth)*30)+(birthDay));</pre> Once the program has figured out how many days the user has been alive it applies that into another formula which calculates how many hours the user has slept. <pre>(daysAlive)*8= lifetimeSleep</pre>	The screen would display how long the user has been alive in days. It displays how long the user has slept in hours.
