

1. a) totalMoney, french_Fries, amount\$, length
b) 10interest, spider-man, class, cheese burger
c) Legal identifiers can not start with a digit, variables cannot contain a hyphen, it cannot use a reserved key word and it cannot contain spaces.
 2. a) `int numBeads;`
`numBeads = 5;`
b) `int numBeads = 5;`
 3. a) 13
b) 11
 4. a) `int`
b) `double`
c) `int`
d) `double`
e) `boolean`
f) `char`
 5. a) Primitive data types can only store a single piece of data while abstract data type can store data and methods.
b) Class is an abstract data type which holds the instruction while objects are the variable within the class.
-
11. a) `int j = 5;`
`double k = 1.6;`
`double y;`
`double z;`
 - b) `int j = 5;`
`double k = 1.6;`
`int y;`
`double z;` It is not necessary as the variable z can already handle decimal values.
 - c) `int j = 5;`
`double k = 1.6;`
`double y;`
`double z;` It is not necessary as the variable z can already handle decimal values.
 - d) `double j = 5;`
`double k = 1.6;`
`double y;`
`double z;`
 - e) `int j = 5;`

```
double k = 1.6;  
double y;  
double z;    It is not necessary as double can handle integers by outputting the value 5.0
```

f)

```
int j = 5;  
double k = 1.6;  
double y;  
double z;    It is not necessary to change as the value will be an integer.
```
