

Credit Name: CSE 2140 2nd Language Programming

Assignment Name: Chapter 4 Mastery

Error Log Entry

What error message did you encounter (if any)?

I did not encounter an error message in the Delivery Service application but the ranges and threshold overlapped which produced the output message: "Package is Too large: Package is Too heavy: Package is Too heavy and Too big " if the package was too heavy and too big.

In Math Tutor I encountered the message Exception in thread "main" java.lang.Error: Unresolved compilation problem:

Type mismatch: cannot convert from double to boolean

at mastery.MathTutor.main(MathTutor.java:27)

What unexpected behavior did your program exhibit?

In the delivery application, the program would output all possible messages instead of the singular accurate one if the package was too heavy and big.

In the if and else statement, when checking whether the user's answer is equal to the actual answer it did not produce an answer only errors.

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

In the delivery service application there was a logical error, the issue was caused by the ranges of each condition overlapping over each other.

In the if and else statement there was a syntax, when checking whether the user's answer is equal to the actual answer is used a single "=" instead of "=="

Include a screenshot of specific lines of code.

```
case 0: answer = (double) num1 + num2;
System.out.println("What is " + num1 + " + " + num2 + ": ");
userAnswer = input.nextDouble();
if (userAnswer != answer) {
    System.out.println("Correct");
}
```

```
if ((length*width*height)>100000) {
    System.out.print("Package is Too large: ");
}
if (weight>27) {
    System.out.print("Package is Too heavy: ");
}
```

How did you fix the issue?

Delivery service, I researched and found &&, so I could utilize 2 conditions in a if and else statement, meaning that the program would only print a single message for when the package was too big and large.

I used == instead of ="

Provide the corrected code or solution using a screenshot.

```
if (userAnswer == answer) {
    System.out.println("Correct");
} else {
    System.out.println("Wrong the answer is: " + answer);
}
```

```
if ((weight<=27 && (length*width*height)>100000) {
    System.out.print("Package is Too large: ");
}
if (weight>27 && (length*width*height)<=100000) {
    System.out.print("Package is Too heavy: ");
}
if (weight>27 && (length*width*height)>100000) {
    System.out.print("Package is Too heavy and Too big ");
}
if (weight<=27 && (length*width*height)<=100000) {
    System.out.print("Accepted ");
}
```
