Include your IPO Chart with your code in Eclipse IDE: We will discuss and demonstrate this in the computer lab.

IPO CHART

Program name:	MathTutor.java	
INPUT	PROCESS	OUTPUT
Hint: What will the user input?	Hint: What is the program going to do with the input information?	Hint: What will the screen display after user input?
The program expects a decimal or integer value from the user, representing the user's answer, after developing a randomly generated math question.	The program randomly picks 2 numbers (num1 and num2) between 1 and 10. The program generates a number (operator) between 0 and 3, to choose an operation, (0 addition, 1 multiplication, 2 division, 3 subtraction.) Inside of a switch, the program calculates the correct answer based on the chosen operator. It compares the user's answer with the final answer within if and else statements.	The screen prints the equation randomly generated math problem e.g. (What is 3*5) Once the user enters their answer, the program will display whether their answer was (Wrong) or (Correct).
